Alart es una empresa dedicada a la producción y comercialización de luminarias para espacios exteriores. Fundada en 1990 por Manel Virgili, que desplegó en ella su acreditada experiencia en el conocimiento de los procesos industriales para, como objetivo de empresa, ofrecer aparatos de iluminación elaborados con materias primas de primera calidad, de producción enteramente nacional y con las máximas garantías de óptimo funcionamiento.

Actualmente, sus sucesoras mantienen este carácter de empresa familiar, con clara vocación de presentar, a todos los profesionales: arquitectos, diseñadores de iluminación, interioristas, paisajistas y prescriptores, productos de gran calidad y durabilidad de uso, con los mismos requisitos de su fundación, pero añadiendo, además, criterios basados en la innovación, para los proyectos de nueva factura, y en la investigación, centrada en su ajuste al respeto por el medio ambiente, el ahorro energético y la no emisión de contaminación lumínica.

Para este último propósito, se inició la producción de luminarias proyectadas por profesionales del diseño industrial, especializados en aparatos de iluminación, de probada solvencia, con el encargo intrínseco de mantener los criterios de construcción, innovación, respeto medioambiental y calidad final del producto.

Todo ello para conseguir un último objetivo: trasladar al cliente final, al usuario que finalmente es el destinatario de los esfuerzos de todos los profesionales implicados, un producto que le permita disfrutar de esa magia luminosa que aparece en todos los espacios exteriores al caer la noche, esa magia que, sin querer imponerse, ni hacerse protagonista, de forma discreta, se nos aparece en los entornos nocturnos y nos envuelve en una atmósfera agradable, distendida, confortable... la magia de la luz en libertad.

Alart is a company dedicated to the production and marketing of lighting fixtures for outdoor spaces. It was founded in 1990 by Manel Virgili, who used his proven expertise and knowledge of industrial processes to identify the company's target of providing lighting equipment manufactured with top quality raw materials of entirely domestic production and with the maximum guarantees for optimal functioning.

Today, their successors maintain the nature of family business, showing a clear vocation to offer all professionals, such as architects, lighting designers, interior designers and landscape architects, a wide range of products of high quality and durability of use. The company keeps its foundation conditions, adding now further criteria based on innovation for those new invoice projects, and research, focusing on the respect for the environment, energy saving and no emission of light pollution.

For this latter purpose, the company began the production of lighting fixtures designed by reliable industrial design professionals specialized in lighting equipment, with the intrinsic condition of maintaining the criteria and standards of construction, innovation, respect for the environment and high quality of the final product..

The final goal of the company is to deliver the customer, who is the final recipient of the efforts of all those professionals involved, a product that will enable them to enjoy the magic of light that appears in all outdoor areas at nightfall; that discreet magic that, far from becoming protagonist or being imposed, appears to us in night settings and wraps us in a friendly, relaxed, comfortable atmosphere... the magic of light in freedom.

## Innovación y Diseño

Desde sus inicios, nuestra colección dispone de luminarias de formas clásicas y tradicionales, segmentadas en diversas tipologías, que han gozado y gozan, de gran aceptación en el mercado. No obstante, la actual dirección, en su inquietud por incorporar productos más evolucionados técnica y formalmente, ha promovido nuevos proyectos desarrollados por profesionales especializados, que, junto con nuestro equipo técnico, ofrecen soluciones innovadoras en el tratamiento lumínico, con un lenguaje formal más actualizado. Asentando, así, las directrices para futuras propuestas.

## Sostenibilidad

En consonancia con la creciente sensibilidad medioambiental de los consumidores y como valor añadido al conjunto de requisitos técnicos, todas las luminarias pueden equiparse con fuentes de luz de bajo consumo. Incluso, en los nuevos proyectos, se ha tenido muy en cuenta el control de emisión de luz parásita para minimizar la contaminación lumínica.

## Fabricación

Una de las características más destacadas y acreditadas por los propios clientes es la calidad de los materiales de fabricación de todos nuestros productos, en todos ellos la calidad de la materia prima es incuestionable, prevaleciendo el uso de acero inoxidable, aluminio y cristal, materiales de gran resistencia a la corrosión ambiental. Esto es básico para ofrecer, desde el principio del proceso de fabricación, una garantía de fiabilidad y durabilidad en las luminarias.

Siguiendo con el proceso de producción, todos los componentes manufacturados se realizan en el ámbito nacional. La mayor parte se transforman en nuestras instalaciones, permitiendo un estricto seguimiento y control de calidad. Los componentes del equipamiento eléctrico son de distinta procedencia europea pero conformes a la reglamentación y homologación que rigen en los países del área comunitaria.

En el acabado final de las luminarias se usan igualmente productos de recubrimiento y protección de máxima calidad, acorde con los criterios de construcción. Todo ello con un amplio abanico de colores de serie y colores personalizados.

## Proyectos a medida

Existe multitud de ocasiones en las que los profesionales no encuentran la solución ideal a sus proyectos en las propuestas ofrecidas por nuestro catálogo. Para estos casos ofrecemos la disponibilidad de nuestra oficina técnica y la flexibilidad de nuestros medios de producción para encontrar, conjuntamente, los requisitos que cumplan con las especificaciones de cada proyecto.

## Innovation and Design

*Since its inception, our collection has had light fixtures of classical and traditional forms, segmented into various types, which have enjoyed and enjoy today wide acceptance in the market. However, the current trend and concern to incorporate more technologically and formally advanced products has promoted new projects to be developed by professionals. This team of professionals, together with our technical unit, provides innovative solutions in the light treatment, using a more updated formal language and establishing this way the guidelines for future proposals.*

## Sustainability

*In line with the growing environmental awareness of consumers, and as an added value to the technical requirements, all the lighting fixtures can be equipped with low-consumption light sources. Also, the control of light emission has been taken fully into account in new projects to minimize light pollution.*

## Manufacture

*One of the most outstanding, reputable features and a point much valued by the clients is the quality of the manufacturing materials of all our product range. The quality of the raw materials is unquestionable, prevailing the use of stainless steel, aluminium and glass. All these materials have a great resistance to environmental corrosion. This is basic and important to offer, from the very beginning of the manufacturing process, a guarantee of both reliability and durability of the light fixtures.*

*Continuing the process of production, all manufactured components are made in a national context. Most are processed in our facilities, allowing a strict monitoring and quality control. The components of electrical equipment come from different European countries, being all of them in accordance with the regulations and standardization rules governing in the European Community countries.*

*In the finishing touches of the lighting fixtures, the company uses protective coating products of high quality, according with the construction standards, and offers a broad range of serial and custom colours.*

## Taylor-made projects

*In many occasions, professionals cannot find the ideal solution to their projects in the proposals offered in our catalog. For this reason, we offer the availability of our technical department and the flexibility of our production means to try and find, all together, the requirements complying with the specifications of each project.*

# Elit

Design Jordi Vilardell

La serie Elit se distingue por su esbeltez y la elegancia del difusor de cristal estriado, creando una atmósfera luminica a su alrededor muy agradable, generada por una lámpara de bajo consumo y alto rendimiento lumínico.

*The Elit Series, which stands out by its gracefulness and by the elegance of the striated glass diffuser, creates in this way a very pleasant light atmosphere around you, which is generated by a low consumption high light output lamp.*
